# PROJECT REPORT

## ON

# **To Your Door**

## **SUBMITTED BY:**

(Arpit Tyagi            201500141)

(Shahid Khan          201500638)

(Anurag Sharma        201500126)

(Muhd Aasim Waseem     201500417)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

**INSITUTE OF ENGINNERING & TECHNOLOGY**

**GLA UNIVERSITY, MATHURA**

# DECLARATION

I would like to express my special thanks of gratitude to my project guide **Ms. Gurpreet Kaur** mam who gave me the golden opportunity to do this wonderful project on the topic **To Your Door**, which also helped us in doing a lot of research and we came to know about so many new things we are really thankful to them.

Secondly, we would also like to thank my parents and friends who helped me a lotin finalizing this project within the limited time frame.

Candidate's Names:

| | |
|---|---|
| **Arpit Tyagi** | **201500141** |
| **Shahid Khan** | **201500638** |
| **Anurag Sharma** | **201500126** |
| **Muhd Aasim Waseem** | **201500417** |

# CERTIFICATE

This is to certify that the above statements made by the candidates are correct to the best of my/our knowledge and belief.

**Project Supervisor**

Mr. Gurpreet Kaur

Assistant Professor

Date: 20-Nov-2022

## 3. System Requirements

## 4. Implementation

## 5. Conclusion

# **INTRODUCTION**

The trend of Food Ordering is increasing rapidly and is have several advantages also like Customers can order from their homes, workplaces as per their comfort, it is easy to cancel the transactions in online food ordering , online food ordering made ordering easy as there are no lines to wait so that we can have food in minutes and during lockdown, people were obligated to stay indoors. During that time, consumers get the essential supplies at their doorsteps because of food ordering websites. Our university campus also have some food shops in complex but it is found that there is no online system for food ordering. Considering all these things the idea of this project came into picture. The idea is to create a website that act as a platform for sellers (complex stores owner) and customer in GLA campus to place  food orders online from complex and get is delivered to their hostel rooms.

## **web:**

Web development refers to the process of creating websites on the Internet.

The term "web development" is relatively broad in its application. You could create a single website page from a wix template, or you could painstakingly develop a massive website with thousands of

original pages — and technically, both of those would count as web development.

Now a day's web development is the thing which is in boost.

# TECHNOLOGY USED

## HTML:

HTML is an acronym which stands for **Hyper Text Markup Language** which is used for creating web pages and web applications. Let's see what is meant by Hypertext Markup Language, and Web page.

**Hyper Text:** Hyper Text simply means "Text within Text." A text has a link within it, is a hypertext. Whenever you click on a link which brings you to a new webpage, you have clicked on a hypertext. Hyper Text is a way to link two or more web pages (HTML documents) with each other.

**Markup language:** A markup language is a computer language that is used to apply layout and formatting conventions to a text document. Markup language makes text more interactive and dynamic. It can turn text into images, tables, links, etc.

**Web Page:** A web page is a document which is commonly written in HTML and translated by a web browser. A web page can be identified by entering an URL. A Web page can be of the static or dynamic type. **With the help of HTML only, we can create static web pages**.

# CSS:

CSS stands for Cascading Style Sheets. It is a style sheet language which is used to describe the look and formatting of a document written in markup language. It provides an additional feature to HTML. It is generally used with HTML to change the style of web pages and user interfaces. It can also be used with any kind of XML documents including plain XML, SVG and XUL.

CSS is used along with HTML and JavaScript in most websites to create user interfaces for web applications and user interfaces for many mobile applications.

## BOOTSTRAP:

- o Bootstrap is the most popular HTML, CSS and JavaScript framework for developing a responsive and mobile friendly website.
- o It is absolutely free to download and use.
- o It is a front-end framework used for easier and faster web development.
- o It includes HTML and CSS based design templates for typography, forms, buttons, tables, navigation, modals, image carousels and many others.
- o It can also use JavaScript plug-ins.
- o It facilitates you to create responsive designs

# PHP: (HYPERTEXT PREPROCESSOR)

PHP is an open-source, interpreted, and object-oriented scripting language that can be executed at the server-side. PHP is well suited for web development. Therefore, it is used to develop web applications (an application that executes on the server and generates the dynamic page.).

PHP was created by **Rasmus Lerdorf in 1994** but appeared in the market in 1995. **PHP 7.4.0** is the latest version of PHP, which was released on **28 November**. Some important points need to be noticed about PHP are as followed:

- PHP stands for Hypertext Pre-processor.
- PHP is an interpreted language, i.e., there is no need for compilation.
- PHP is faster than other scripting languages, for example, ASP and JSP.
- PHP is a server-side scripting language, which is used to manage the dynamic content of the website.
- PHP can be embedded into HTML.
- PHP is an object-oriented language.
- PHP is an open-source scripting language.
- PHP is simple and easy to learn language.

# SYSTEM REQUIREMENTS

## Software Requirement-

### To build application –

- 64-bit Windows 8/10/11

- Libraries

- Visual Studio code (latest version).

### To Run Website –

- Web Browsers (chrome, Mozilla)

## Hardware Requirement –

- x86_64 CPU architecture; 2nd generation Intel Core or

  newer

- 8 GB RAM or more

- 8 GB of available disk space minimum

# IMPLEMENTATION

## Final Code:

- ## page 1:

```html
<!DOCTYPE html>

?>
```
# WORKING

1. Customer will open the site and will see the home page.
2. On home page we have two options signup and login.
3. Here a new customer can sign up and can create an account, Existed customer can login by entering the desired details.
4. After login, the customer will be directed to the second page of the website, where we have all the shops.
5. On click the 'menu' button under the shop, customer will get a menu of particular shop and order.

# CONCLUSION AND FUTURE WORK

## Conclusion:

As per the goal of this project an attempt is made to show how we can take a business online and also enable users to Order food online from there hostel rooms.

To your Door website acts as a platform between user (student or faculties) and sellers of Shopping complex of GLA university to provide tasty and delicious food online. Also, it provides support to sellers to take their business online and grow it.

## Future work: -

The scope of food ordering in India bloomed during the pandemic. This success can also be the result of increased internet use among our generation.

Many different adaptations, tests, and experiments have been left for the future due to lack of time. The present system is just an interactive UI with user database but Future work concerns with developing an Admin panel and a data base to store products detail with user information.
